

## 1289 - Salish Soils, Sechelt, B.C.

Salish Soils on the B.C.'s Sunshine Coast is a First Nation's owned and operated facility, that processes wood, fish and other organic wastes into valuable soil amendment products. To minimize odours, and for more practical and efficient all-season receiving, composting and curing, BuildWorks constructed

this large 20,000 sq. ft. MegaDome. To ensure long term performance under corrosive conditions, the MegaDome frame components are factory hot-dip galvanized. A custom suspended interior gable achieves air-space segregation to complement the air-exchange and processing in a biofilter.
