## 943 - STANDARD LUMBER, North Vancouver B.C.

When it comes to building supplies, every contractor has their 'Standard', and this firm improved it by utilizing a MegaDome engineered fabric building and a well-organized racking and shelving system to allow contractors to find their product

quickly and conveniently, and – in case of sheathing materials – totally protected from inclement weather conditions. Overhead doors at the front and back provide easy thru-flow forklift and truck access.
