## 1728 - Pinnacle Pellet, Houston B.C.

***Tried and True*** – Pinnacle Renewable Energy partnered with Canfor and the Moricetown Indian Band and installed a wood pellet manufacturing plant in Houston, northern BC in 2007. This facility now produces over 200,000 tonnes of industrial wood pellets annually.

Achieving optimum production levels required more storage for biomass material. A 13,000 square foot MegaDome, installed on 10 foot high bunker walls, was selected for its tried and true performance record on design, engineering and installation efficiency.
