INDUSTRIAL

Growing with Quality— Coastland Wood Industries is a worldwide leader in veneer production, providing exceptional products from their modern Annacis Island facilities. A crucial component of their quality control is ensuring veneers remain dry. To solve this critical challenge, the company first added a 7,000 square foot MegaDome® to gain much-needed dry storage capacity for their

finished veneers. The success of this solution led to a second 12,000 square foot MegaDome®, which further addressed their expanding needs. The subsequent construction of a third MegaDome®, a 50x160 XP eXtra High Profile structure, was needed to support the company's growth and meet increasing demand.
