

## Gas Plant - Alberta

4257

Grande Cache, AB

XP40x80

Storage Structure

*Built Strong. Built Remote. Built to Last.* A MegaDome® XP40 × 80 was designed and installed in remote Alberta to withstand tough operating conditions. The building sits on one row of concrete blocks, with 8' CC truss spacing for superior strength. An overhead door and man-door at the front, paired with

a rear man-door, ensure safe and efficient access. With its bright interior, durable fabric covering and column-free span, the structure delivers dependable year-round coverage. This project reflects MegaDome's ability to provide cost-effective, high-performance solutions in challenging locations.
