Industrial Storage/ Training Facility

Building Skills. Building Safely — As construction progresses on the new Surrey Hospital and BC Cancer Centre, EllisDon continues to invest in the people responsible for bringing this major healthcare project to life. To support workforce development on site, a new MegaDome® structure provides a dedicated environment for new-hire orientation, hands-on training and ongoing safety education.

The spacious, naturally bright interior creates a comfortable, weather-protected area where workers can learn, prepare and develop the skills needed to work safely and effectively. Flexible, durable and quickly constructed, the MegaDome provides EllisDon with a practical training facility that can adapt alongside the evolving needs of this significant construction project.
